### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

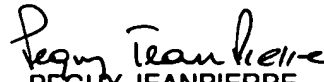

2. Claims 1-3, 6-7, and 9-116 are rejected under 35 U.S.C. 102(b) as being anticipated by Baldwin (USP 4,851,837).

Baldwin discloses in Figure 6 a record carrier having signal recorded on a track that comprises a sequence of successive information signal portions. Each signal portion comprises n-bit cells having a first logical value "0" or a second logical value "1" that is distinct from each other and alternately recorded based on the track information pattern. The signal portion further represents a unique information word. The information word is spread over one group of a first type represented by codebook "A" and a group of a second type represented by codebook "B" (see Fig. 3). For instance, in the first type transitions are barred in a number of cells in the word being coded and also in the subsequent word whereas in the second type transitions are permitted in the same number of cells previously recited in the first type (see col. 3, lines 1-3 and col. 4, lines 14-15). The information word also comprises signal sync signal portions that have bit cells that do not occur in the sequence of successive information (see col. 5, lines 27-29); for instance, for synchronization purpose a transition at a particular bit cell (14) never precedes any word in code book B (group of second type): in other words, a

Art Unit: 2819

Unique information word is established by information signal portions of at least on group of the second type and combined with an adjacent signal portion. Codebooks A and B generate a plurality of constraints provide a plurality of d, k constraints. In the codebooks in Figures 1-3, a ":" indicates a transition is permissible, a "o" indicates that a transition is not permitted, therefore, any constraint such as d=2 and k=10 or any values of d and k can be satisfied (see col. 3, lines 1-5) and the end of each bit cells can assume the same or different values. The running value at any point in the signal is kept low (see col. 6, lines 33-45).
